

Power electronics manufacturer ZOPF acquires busbar supplier EMEK

We are happy to welcome the EMEK team to the ZOPF family starting September 16, 2021. ZOPF Energieanlagen GmbH is a manufacturer of power electronics for the renewables energy sector and industrial applications. ZOPF is based in Leipzig, Germany. EMEK GmbH is a German based developer and manufacturer of laminated multilayer busbars and conductor rails for applications in the renewables industry (wind & solar) and the e-mobility space (automotive & rail).

At ZOPF Energieanlagen, our goal is to deliver high-quality products and fast refurbishments to our customers. To enhance the flexibility of our power stack production, we invested in assembly capabilities of printed circuit boards (PCB) in 2019. With the acquisition of EMEK we are now expanding our expertise and manufacturing capabilities to multilayer busbars and conductor rails. This will further increase the ability to react quickly to customer demands.

We highly appreciate that Bernd Kessler, the current managing director of EMEK GmbH, has agreed to support ZOPF also in the future. He will continue to lead the development and manufacturing team at the site in Vöhrenbach, Germany.
